

“We would like to thank you from the bottom of our hearts. Our daughter attended a playgroup in the Spring, and she had a picture taken by the Lions Club with a very special camera. This free vision screening was a blessing to our family.

Victoria had a juvenile cataract in her left eye. The doctors believe she was born with a defect in the back of her eye which pre-disposed her to forming this type of cataract. Her eye problem was never found during her well child check-ups, and if it was not for the Lions Club finding it when they did, Victoria could have lost her sight.

Victoria turned three in January, and thanks to you, she will be a normal and healthy little girl with two beautiful eyes. Her doctors believe, that with glasses, she will have normal vision.”
